Curriculum Vitae
Erik W. Aslaksen PhD
Director

March 2019

Qualifications

- Primary School: Bygdøy Folkeskole, 1944 -1951
- High School: Oslo Kathedralskole, 1951 -1956, mathematical-physical line.
- Military Service as Communications Technician in the Royal Norwegian Air Force, 1956 -1958.
- MSc in Electrical Engineering. Swiss Federal Institute of Technology Zürich, 1958 -1962.
- Communications Technology Course (corresponding to MA), Bell Telephone Laboratories, 1963 -1964.
- PhD in Physics. Lehigh University, 1964 -1968.
- Certified Professional Logistician (CPL), Society of Logistics Engineers, 1993.
- Certified Systems Engineering Professional (CSEP), INCOSE, 2004.

Affiliations

- Fellow, INCOSE
- Fellow, Royal Society of NSW
- Member, Australian Institute of Physics
- Associate, University of Technology, Sydney

From January 2005 to June 2007, Dr Aslaksen was Associate Technical Director – Technical Review, in the INCOSE Technical Leadership Team. He is a Charter Member and Director of the Omega Alpha Association, the Honor Society for Systems Engineering (www.omegalpha.org). He was elected a Fellow of the Institution of Engineers, Australia, in 1990.

Gumbooya Pty Ltd (2012 -)

Engineering management and technical advice to industry and government, and ongoing research projects into the foundations of engineering and the interaction

between engineering and society. Erik was the Technical Lead for Rail Systems on the North Strathfield Rail Underpass project in Sydney (2012-2014), and Lead Engineer, Communications and Control, on the North Eveleigh Switchroom project (2014) and on two traction substation projects in Sydney (2015).

Sinclair Knight Merz (1988 – 2012)

Initially Director of Ewbank Preece Sinclair Knight (1988-1994), the electrical and mechanical division of Sinclair Knight & Partners, then a Senior Principal (1994-2004) and Senior Consultant (2004-2012) of Sinclair Knight Merz Pty Limited, one of Australia's leading consulting engineering firms. Responsible for systems engineering and engineering management aspects of large projects as well as the design of systems in the area of control and automation.

Projects include system design for the Department of Defence (project Parakeet), engineering management support to the Departments of Defence and Foreign Affairs and Trade, and evaluation of information technology support systems for the banking industry (through EFIC). Dr. Aslaksen was also manager of the successful bid, jointly by the University of Technology, Sydney and Sydney University, for one of three Advanced Engineering Centres, the Australian Graduate School of Engineering Innovation, where he was a member of the Program Committee. Other assignments include the project management of the full EPCM of one of Australia's most significant new mining developments, the Northparkes E26 Mine; the management, on behalf of the Public Transport Corporation of Victoria, of its new Train Management Facility; project manager for Project Paragon, the replacement train management system for north-west NSW; development of the business case for the Headquarters Australian Theatre; design of control and communications systems for underground mines in Chile; project director for the design of the base stations for the Orange 1800 MHz network; and interim manager of Rail Infrastructure Corporation's design team for the Parramatta Rail Link.

More recently he has been involved in a number of Intelligent Transport Systems (ITS), was design manager of a coal upgrade facility in East Kalimantan employing leading edge technology, undertook the restructuring of the engineering function of a major health food producer, and was lead engineer for underground instrumentation and control in the East Cadia Mine project.

Previous Appointments

Outside Australia:

1963-1967

Member of Technical Staff, Microwave Ferrite Device Development Department, Bell Telephone Laboratories Inc., Allentown, Pa, USA.

1967-1968

Teaching Assistant, Physics Department, Lehigh University, Bethlehem, Pa, USA.

1968-1970

Member of Technical Staff, Quantum Electronics Research Department, Bell Telephone Laboratories, Inc., Holmdel, NJ, USA.

1970-1973

Senior Research Scientist, Theoretical Physics Group, Corporate Research Centre, Brown Boveri & Company, Baden, Switzerland.

1973/74

Technical Director, Müller-Barbieri, Switzerland (preparing the company for sale).

1974-1977

Technical Director, GUTOR-Group, Wettingen, Switzerland.

Manufacturers of sheet metal products, transformers and industrial electronics; with 300 employees. Responsible for all product development, costing and production, and, as a member of a three-man management team, responsible for running the company. Advised the Board on several acquisitions, and was involved in the group-wide introduction of the IBM COSTING Management Information System.

1977-1981

Own consulting firm, ASLAKSEN AG. Engineering expertise in the field of industrial electronics, in particular reliability and systems aspects of power supplies, as well as engineering management support. Development of a computer-supported design, costing and tender preparation system for a leading firm of consulting engineers. Re-organisation of a small electronics firm.

In Australia:

Feb-June 1982

Senior Consultant, Ewbank Belford Pty Ltd. Control system for a four-drum winder in Kalgoorlie, and the design and economic analysis of a gas pipeline from Palm Valley to Alice Springs.

1982-1984

Deputy Manager - Electrical Division, Brown Boveri (Australia) Pty Ltd. Responsible for technical support and sales of the product groups protection, static excitation, large variable-speed drives, frequency changers, and computer-based control systems. A major work was the tender design of the 50-to-40 Hz power converter at Broken Hill.

1984-1985

Manager - Systems Division, Brown Boveri (Australia) Pty Ltd. Responsible for a division of 22 persons, mostly computer engineers, concerned with the engineering and sales of computer-based systems. In particular, a leading position was developed in the SCADA market.

1985-1988

Technical Manager at Racal Electronics Pty Ltd, with particular responsibility for the technical and trials management of Project PARAKEET, a new tactical communications system for the Australian Army (projected cost about \$300M). It is a mobile, digital system, based on distributed computer-controlled switching with delta-modulation and time-division multiplexing, and employing such diverse technologies as satellite, HF, UHF, and troposcatter transmission, voice, telegraph, and data services and various levels of encryption.

The technical and trials management included final and overall responsibility for the following aspects of the project:

- Systems engineering, ensuring full compliance with the Army Staff Requirement.
- Design of various types of mobile assemblages.

- Development of detailed engineering plans for the areas of Reliability, Maintainability, Human Engineering, Integrated Logistic Support and all aspects of Testing.
- Estimating and scheduling of all activities, and supervising their day-to-day execution.
- Personnel management for a team of twelve engineers.
- Liaison with the Commonwealth.

Teaching Experience

1967-1968

Teaching Assistant, Physics Department, Lehigh University. Tutorials and laboratory supervision in undergraduate physics.

1971-1972

Course on Quantum Electronics at the Swiss Federal Institute of Technology.

1983-2000

Adjunct Professor in the Faculty of Engineering at the University of Technology, Sydney. Lecturing in systems engineering, power electronics, and engineering management, as well as participation in curriculum development.

Research Experience

Microwaves

Research on low-temperature (4K) ferrite devices leading to the development of commercial devices. First introduction of ferrite devices into integrated microwave networks.

Quantum Field Theory

Basic research into optical interactions in matter and the theory of such optical devices as lasers and parametric amplifiers.

Mathematical Methods

Extensive work on digital modelling and numerical analysis of physical processes and devices (theoretical support for experimental physicists).

Power System Control

Reliability aspects of power systems, in particular the influence of the control subsystem on reconfigurable systems.
